

Rugged and versatile visual level indicator and continuous level transmitter in a single package.

LED SureSite®: Designed to transmit and display continuous level where others fail.

Bright LED illuminated level sensor

LEDs make it easy to see the level of your tank in low light and dirty environments where traditional units would get covered or be invisible.

Continuous Level transmitter and visual indicator

No need to double up and purchase additional transmitters to bolt onto your visual indicator. LED SureSite® is both a continuous level indicator and a transmitter in one product.

270 degree viewing range

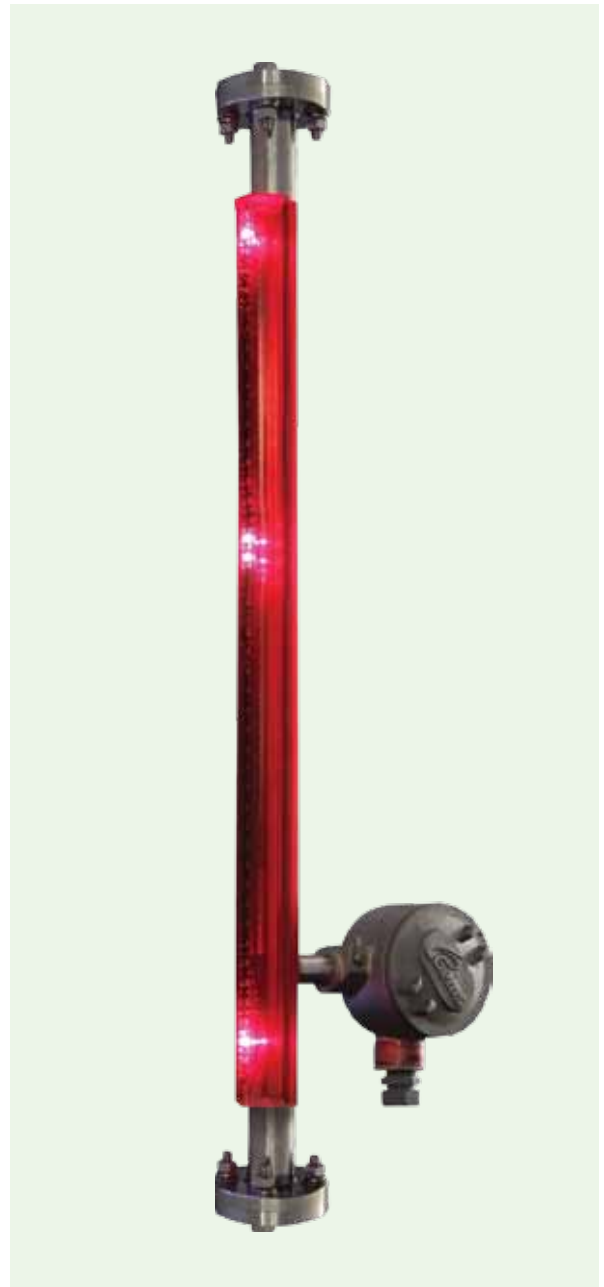

Our Bright LED lights make it easy to view your LED SureSite® from virtually all vantage points.

Upgrade kits available for existing mini SureSites®

If you already have a traditional flag type SureSite®, you can update to the new LED version. Contact your sales representative with any questions.

Built to withstand the most difficult environments

LED SureSite® is built to withstand constant vibration and shock while operating, putting your mind at ease. Every unit can withstand freezing temperatures, rain storms, and wash down.

A Bright Solution for Your Most Demanding Applications

LED SURESITE®

Commercial Marine

Designed to work below deck.

Diesel Locomotives

Withstands constant vibration.

Large Storage Tanks

Available in sizes up to ten feet.

Generator Fuel Tanks

LEDs are visible in direct sunlight.
